Excel. Lead.

XL-Lead has been providing high quality information technology consultative services since 2014. Our unique approach to IT management services leads to successful, on-time, and within budget engagements. Below are our service areas:

Our Services

Project Management

Our team of experienced Project Managers work directly with our clients to understand the challenges they face or the opportunities that lie ahead. Based on our methodology, our Project Managers will develop a plan, execute on the agreed upon plan, monitor and communicate status, and monitor adoption after close out if necessary.

Process Improvement

Our experienced Project Managers are skilled with facilitating process re-design sessions. Coupled with our own methodology of managing change, our team is well poised to assist with the difficulties that come with reshaping processes.

Organization Readiness / Change Management

Sometimes dedicated resources are necessary to ensure that the right behavior change is taking place. As 70% of all change efforts typically fail, we recognize that it is crucial to have focused and experienced change management professionals available. Our team has experience in developing and executing organization readiness plans.

IT Governance

For growing organizations, an oversight framework and robust internal processes are necessary. Our experienced IT professionals work with clients to establish department wide operations, budgeting and forecasting processes, business continuity plans, and governance oversight committees with business stakeholder participation.

Managed Services

Looking to run your core IT services or infrastructure in a scalable secure manner? We manage all the back-end details for your enterprise so that you don't have to.
